

Workshop for ADO.NET

1. The solution does not include optional tasks, which are for your own exploration.
2. Before running the application, please make sure that you have created the database called **adoWorkshop** with 3 tables:

Please note that, for table **LecturerCourse**, the two columns *LecturerId* and *CourseId* make a **composite primary key**.

The tables can be created by running the script inside `/db/data.sql`

3. You should also prepare some mockup data. For example:

Table **Course**

Id	Code	Name	Description
1	FOPCS	Foundations of Programming with C#	Write programmes using C# with Visual Studio
2	OOPCS	Object Oriented with C#	Understand and programming on main Object Oriented concepts.
3	MVC.NET	ASP.NET MVC Programming	Understand and develop web applications using ASP.NET MVC.

Table **Lecturer**

Id	Username	LastName	FirstName
1	isscyk	Chia	Yuen Kwan
2	isspb	Peng	Bin
3	isslf	Liu	Fan
4.	lssvc	Chung	Vincent

Table **LecturerCourse**

LecturerId	CourseId
1	2
1	3
2	2
2	3
3	2

The mock data can be created by running the script in `/db/data.sql`
