

ASP.NET Core Workshop

ADO.NET

Requirements

In this workshop, we will create a simple web application using ASP.NET ADO.NET with the following features.

1. When the users access /Course, the app displays all courses.

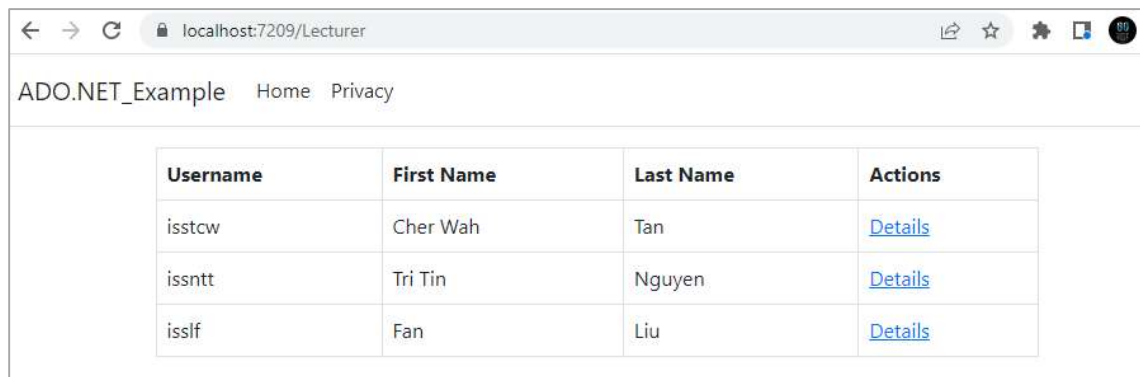

Course Code	Name	Actions
FOPCS	Foundations of Programming with C#	Details
OOPCS	Object Oriented with C#	Details
MVC.NET	ASP.NET MVC Programming	Details

2. When the users click on the **Details** action above, the details of the respective course will be displayed.

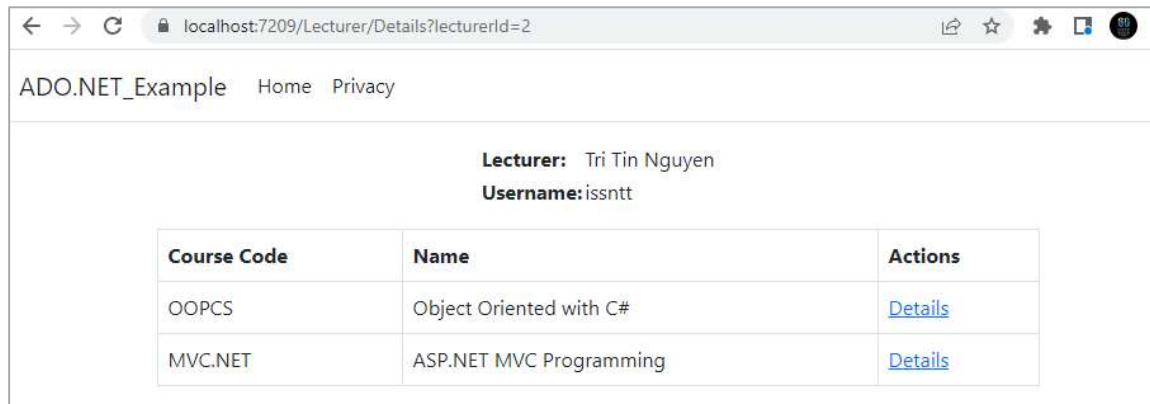

Course:	Foundations of Programming with C#
Code:	FOPCS
Description:	Write programs using C# with Visual Studio

3. The app can also display all lecturers at /Lecturer.

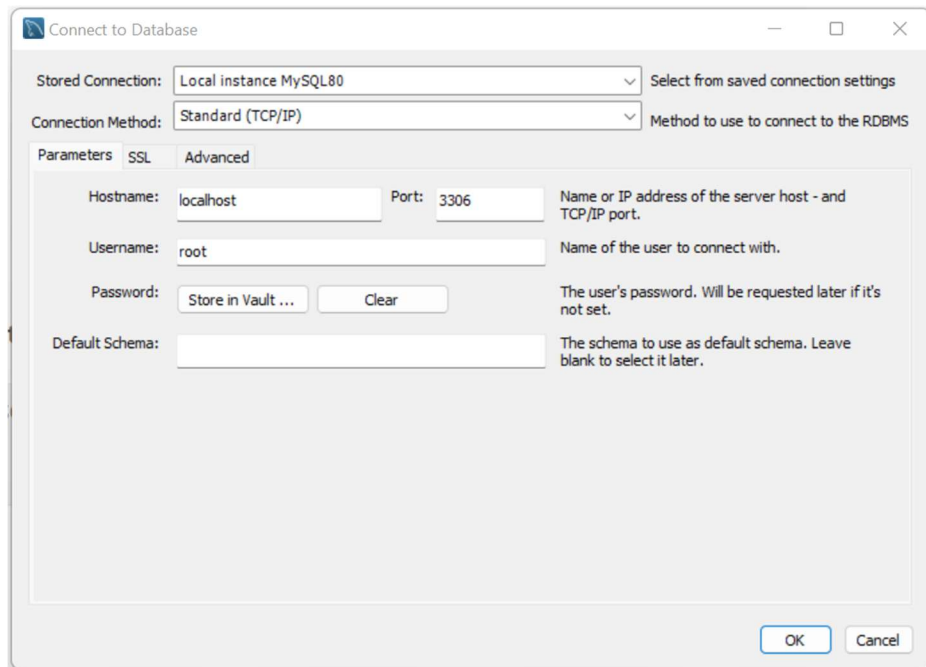

Username	First Name	Last Name	Actions
isstcw	Cher Wah	Tan	Details
issntt	Tri Tin	Nguyen	Details
isslf	Fan	Liu	Details

- When the users click on the **Details** action above, it also displays all courses the respective lecturer teaches.

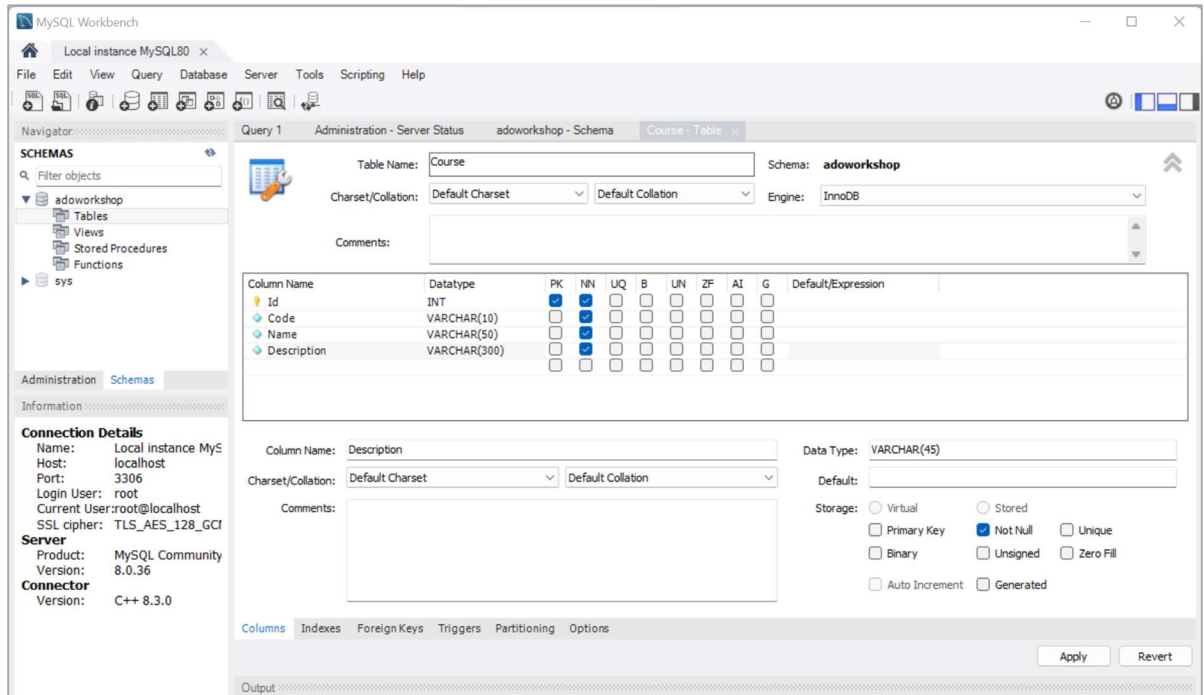

Prepare Database

- Open MySQL Workbench
- Select Database -> Connect to Database (Ctrl+U)...

- Enter the root password when you install MySQL
- Click OK.
- Create a new database named **adoWorkshop**.

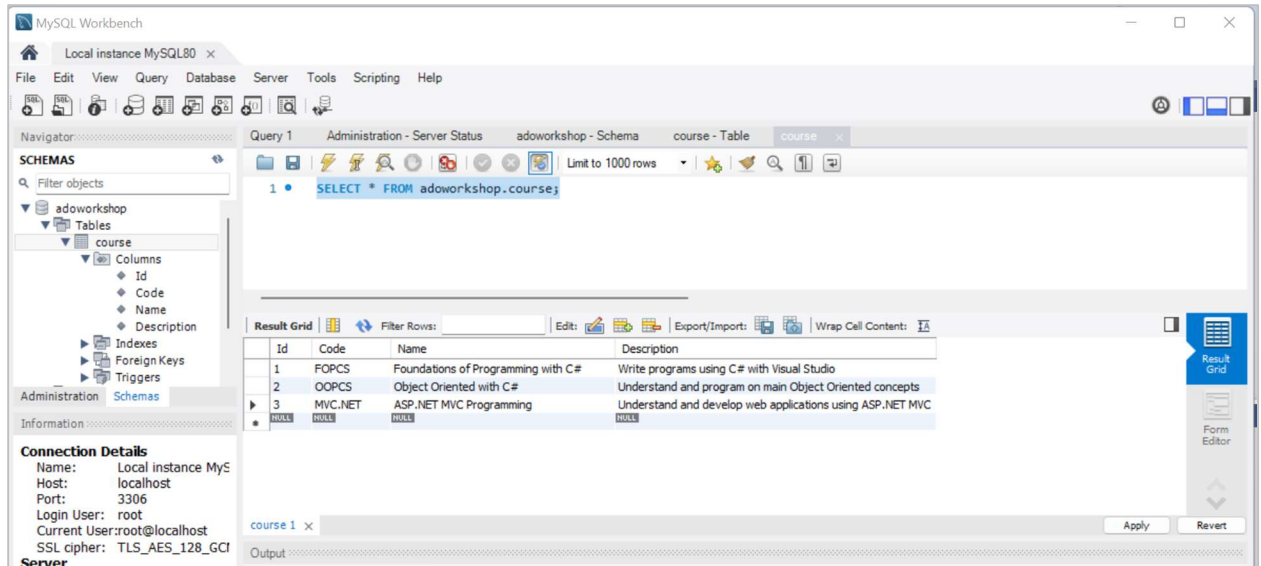

- Select the new adoWorkshop schema, create a table named **Course**, with following columns

Remember to click “Apply” for the changes.

- Input some data into the **Course** table. For example

Id	Code	Name	Description
1	FOPCS	Foundations of Programming with C#	Write programs using C# with Visual Studio
2	OOPCS	Object Oriented with C#	Understand and program on main Object Oriented concepts
3	MVC.NET	ASP.NET MVC Programming	Understand and develop web applications using ASP.NET MVC

Remember to click “Apply” for the changes.

Implement Features

1. Implement the feature that displays all Courses.
2. Implement the feature in which clicking on the **Details** action displays the details of the respective course.
3. Further extend the web application to store and list all courses a lecturer teaches. One lecturer can **teach more than one** courses, and a course can be taught **by more than one** lecturers.
4. (Optional) Further extend the web application to add creating new courses feature.
5. (Optional) Further extend the web application to add searching courses by **Name** and by **Course Code**.
